NEWS RELEASE

Lahontan Gold Corp. Receives Drilling Permits for Santa Fe

Toronto, Ontario – March 10, 2021 – Lahontan Gold Corp. (the “Company” or “Lahontan”) is pleased to announce that it has received approval from the United States Department of the Interior’s Bureau of Land Management (“BLM”) for its 2021 drill program at its flagship Santa Fe project located in the Walker Lane gold belt of western Nevada. Lahontan plans an ambitious drilling campaign totalling approximately 25,000 meters of both reverse-circulation and diamond core drilling. The First Phase of the drilling program will include eleven reverse-circulation drill holes totalling 3,353 meters plus seven core holes totalling 1,981 meters. Data generated during Phase One drilling will be utilized to fine-tune the balance of this year’s drilling campaign.

Lahontan is fortunate to have an extensive geologic and geochemical database from both its own field work and from data generated during five years of gold and silver production (345,000 ounces of gold and 710,000 ounces of silver; Nevada Bureau of Mines and Geology, 1996) between 1988 and 1992 plus subsequent exploration programs. The project has a historic drill hole database of nearly 1,200 drill holes totalling over 110,000 meters. Lahontan used the database to build a robust geologic model of the gold and silver mineralization at Santa Fe. Geologic interpretation and modeling suggest that appreciable oxidized gold and silver mineralization remains at Santa Fe as well as deeper, high-grade mineralization typified by the BH zone which extends from the Santa Fe open pit. The drilling is planned to verify the historic drill hole database, in-fill drilling, and to test for extensions to known gold and silver mineralization. About Lahontan Gold Corp:

Lahontan Gold Corp. is a privately held Canadian mineral exploration company that holds, through its US subsidiaries, three top-tier gold and silver exploration properties in the Walker Lane of mining friendly Nevada. Lahontan’s flagship project, Santa Fe, is a past producing gold and silver mine with excellent potential to host significant gold and silver resources. Modeling of over 110,000 meters of historic drilling, geologic mapping, and geochemical sampling outline both shallow, oxidized gold and silver mineralization as well as deeper high grade potential resources. The Company plans an aggressive 25,000 meter drilling program with the goal of a NI 43-101 resource estimate in Q4 2021.

All scientific and technical information in this press release has been reviewed and approved by Quentin J. Browne, P.Geo., Independent Consulting Geologist to Lahontan Gold Corp., who is a qualified person under the definitions established by National Instrument 43-101.
